

For Immediate Release

MediNotes Corporation releases Upgrade to MediNotes e EMR Software

West Des Moines, IA (May 9, 2007) – MediNotes Corporation, the leading provider focused solely on electronic medical record software, announced today that it has released an upgrade to its **MediNotes e™** software program used by thousands of medical practices in the United States and Canada.

MediNotes e is a high performance, ambulatory electronic medical record system. It is built around an easy to use and learn interface. Interface components display patient, practice, document management, messaging and workflows in personalized and easily accessible views. Using tabs, providers can quickly toggle between patients or tasks without the need to navigate to a separate area of the program, saving them valuable time and allowing unprecedented access to clinical information at the point of care.

Developed and produced in the Midwestern United States, **MediNotes e** includes enterprise class features such as automated workflow, internal messaging, patient-tracking, health maintenance, ad-hoc reporting, and role based security.

Additional enhancements to this **MediNotes e** upgrade include:

- **Immunization Tracking** - color-coded indicators give “at-a-glance” access to overdue, current and pending immunizations. The tracking panel allows for direct input of immunization injections as well as historical injections. All components are integrated into the **MediNotes e** workflow features.
- **eRx** – expanded existing functionality to the award winning Rcopia from DrFirst, the nation's leading electronic prescribing system. Together with DrFirst, the enhanced MediNotes eRx module streamlines the entire prescribing and refill workflow.
- **eScan and Scan** – expanded functionality of this powerful solution for integrating paper charts, lab results, insurance information, and virtually any document into **MediNotes e**. eScan provides the bridge from paper to electronic medical records, this versatile solution allows for complete personalization and seamless integration of documents into existing patient charts. Categories for different types of documents can be easily created, allowing for instant access to pertinent patient data from within a patient’s chart in **MediNotes e**. This can also be purchased as a standalone – MediNotes Scan.
- **Orders** – a complete solution for physician order entry. Designed for flexibility, the **MediNotes e** order entry system seamlessly integrates into the internal workflow system with out-of-the-box support for internal and external laboratory orders and the creation of order documents for any requirements.
- **Red Titan/File Upload Service** – this device allows medical equipment that does not have a specific interface with MediNotes e, to have the capability to communicate with the program. If the device has the ability to print, Red Titan takes that information and sends it to MediNotes e where it can be imported into the program for use.

About MediNotes Corporation

MediNotes Corporation is a leader in Best of Breed electronic medical record solutions for primary care and specialty medical practices with 1-15 physicians. MediNotes e currently serves more than 4,000 installed sites and more than 15,000 users nationwide.
