

MediNotes and Welch Allyn Announce Integration of EMR System and Digital Diagnostic Devices

West Des Moines, IA, May 25, 2007 – MediNotes Corporation, a leading provider of best-of-breed electronic medical record solutions for small to medium primary care and specialty medical practices, announced today that they have partnered with Welch Allyn, a leading global manufacturer of frontline medical products and solutions to integrate the Welch Allyn family of connected cardiopulmonary and electronic vital signs devices with MediNotes e version 5.1, the company's point-of-service, wireless data collection and documentation system.

Many of Welch Allyn's products, including the entire EMR-ready family of electronic vitals devices such as the Spot Vital Signs® LXi, the Spot Vital Signs® 420 Series and the Vital Signs Monitor 300 Series, are directly integrated within MediNotes e version 5.1. In addition, Welch Allyn's comprehensive, PC-based cardiopulmonary line contains seamless bidirectional connectivity with MediNotes e via the Welch Allyn CardioPerfect™ Workstation software. The Workstation is an electronic database for diagnostic records providing paperless efficiency and connectivity. Combined with other Welch Allyn diagnostic modules, the Welch Allyn CardioPerfect Workstation gives complete access to all diagnostic tests for each patient.

"Providers are under constant pressure to save time, screen and diagnose accurately, and treat patients quickly without compromising care," said Steve Meyer, executive vice president, Ambulatory Care and the Americas at Welch Allyn. "Handwritten vitals and scanned ECG test reports with transcription and file association errors complicate matters further. By teaming with leading healthcare technology companies like MediNotes, we are able to provide more EMR connectible devices than any other medical device manufacturer in the ambulatory care space. And by offering more connectivity options, we help reduce these pressures so practitioners can be more productive and focus on their most important task—enhancing patient care."
