

## **MediNotes EMR Solution to Use Enhanced e-Prescribing Services from Per-Se Technologies; Agreement Will Increase Provider Communication and Patient Safety Initiatives for 9,000 Physician Clients**

ALPHARETTA, Ga., May 22, 2006 (BUSINESS WIRE) -- Per-Se Technologies (Nasdaq: PSTI), the Connective Healthcare leader that helps physicians, pharmacies and hospitals realize their financial goals, has signed a three-year agreement to provide enhanced e-Prescribing transaction processing services to MediNotes Corporation. Per-Se's direct electronic connectivity to 90% of the nation's pharmacies is expected to enhance communication and patient safety initiatives for the 9,000 physicians who currently use MediNotes' electronic medical record solution.

Physician clients who use MediNotes' EMR solution will now access Per-Se's Intelligent Network for enhanced pharmacy transaction processing services. This access will help facilitate pharmacy and prescriber communications for electronic prescription drug orders and refill authorizations. Electronic prescription messages also will be transmitted electronically to payers via Per-Se's pharmacy network.

"By incorporating Per-Se's Connective Healthcare solutions with MediNotes EMR, we are providing current and future clients with the best e-Prescribing solution available on the market today. Working with Per-Se will allow us to continue to provide a high-quality EMR with great service and support -- all at a price point that is affordable to those in the ambulatory market," says Don Schoen, CEO of MediNotes.

In addition to e-Prescribing connectivity, access to Per-Se's secure pharmacy network will allow MediNotes clients to check patient eligibility data, benefit plan drug formularies and patient medication history at the point of care. Physicians who access this information may then incorporate appropriate clinical and benefit information into their selection of therapies for patients during the prescribing process. As a result, patients receive prescriptions optimized for their benefit and formulary coverage, while the physician helps contain prescription drug costs and reduce errors related to potential drug interactions.

"Our goal is to connect more and more providers to e-Prescribing technology in order to drive efficiencies in healthcare and for optimal patient care," says Scott MacKenzie, Pharmacy Solutions president, Per-Se Technologies. "Working with an EMR leader like MediNotes allows us to reach 9,000 more physicians across the country in order to streamline the way these physicians create and submit prescriptions."

Per-Se is the only value-added reseller of the SureScripts Electronic Prescribing Network. Per-Se's Intelligent Network connects to approximately 90 percent of all retail pharmacies in the United States and to virtually all third party payers. In the near future, physicians who use e-Prescribing applications also will be able to access medication therapy information.

MediNotes is a preferred EMR partner of Per-Se Technologies.

### About MediNotes Corporation

MediNotes Corporation is a leader in electronic health record solutions for primary care and specialty medical practices and currently serves more than 3,400 installed sites and more than 9,000 users nationwide. The company's dedicated employees are driven to create technology solutions that are proven, powerful and provide doctors with peace of mind. The enhancements of MediNotes are based on the needs and suggestions of users as well as the competitive EMR landscape.
